

PIEZOELECTRIC DEVICE FOR INJECTOR

5

ABSTRACT OF THE DISCLOSURE

10 A piezoelectric device 1 for an injector, built into
an injector and generating driving force of the injector,
wherein a relation $d(0.1E_c)/d(1.2E_c) \geq 0.50$ is
established between an apparent piezoelectric constant
 $d(1.2E_c)$ calculated from static elongation when an
electric field of $1.2 E_c$ is applied to the piezoelectric
device in the same direction as a polarizing direction
15 while a preset load of 500 N is applied to the
piezoelectric device, and an apparent piezoelectric
constant $d(0.1E_c)$ calculated from static elongation when
an electric field of $0.1 E_c$ is applied to the
piezoelectric device in the same direction as the
20 polarizing direction. The piezoelectric device so
fabricated has high durability and can be used for a long
time. The piezoelectric device 1 is fabricated by
alternately laminating a plurality of piezoelectric
layers expanding and contracting in proportion to an
25 applied voltage and a plurality of internal electrode
layers for supplying the applied voltage, and the
sectional shape of the piezoelectric device crossing at
right angles the laminating direction is partially or
wholly arcuate. The piezoelectric device 1 is
30 accommodated in a cylindrical accommodation space.
